

The Mist - Playtest 1

Feedback

- Hamster jumps too high.
- Only show new game warning if save game exists – not on first start.
- Make Q, E and arrow images in the tab menu into buttons.
- Figure out controls – switching between being able to use keyboard and needing mouse too much.
 - Set dialogue option to active object in event system so can navigate.
 - Make inventory system navigable using the WASD keys.
 - Add mouse click as a key bind for continuing dialogue.
- Darken non selected party members in party UI. – Found it a bit confusing with just the background colour change.

Changes Implemented

- Inventory slots can now be navigated and selected using the WASD keys.
